

Tilen Žel

✉ Email: tilen.zel@gmail.com

📍 Location: Ljubljana, Slovenia

🐙 Github: github.com/TZ387

EDUCATION

University of Ljubljana

Faculty of Mathematics and Physics

Master's Degree (Physics)

SKILLS

Languages and platforms:

C/C++ , Python , Matlab , Julia , CUDA 

Other:

Microsoft Office, LaTeX/Typst, Medical Physics, Photonics

PROJECTS

Magnetic simulation for arbitrary coils (Fotona): *Matlab, C, CUDA*

Modified a Matlab toolbox for calculation of magnetic field, improved it to enable calculation of induced current in tissue, and accelerated it by enabling its computation on graphic card using C and CUDA.

Laser resonator simulation using 2D FFT (Fotona): *Julia, CUDA*

Developed a simulation of laser cavity dynamics for both stable and unstable resonators using Fourier optics beam propagation, with optional GPU acceleration.

Simulation of capillary tubes (FS): *Matlab, C++, wxWidgets*

My work consisted of minor assistance in the creation of the original code in Matlab and re-implementation of the entire project to the C++ programming language, along with creation of a GUI.

Further projects (Python, JavaScript, Matlab, Julia, Qt/QML etc.) are available on my GitHub page.

WORK EXPERIENCE

Fotona

R&D Engineer

Ljubljana

Sep 2021 - Present

- Made major improvements in area of numerical simulations, which has led to significant benefits for research and regulatory approval of various devices.
- Participated in research projects involving laser technology, laser treatments, and laser-tissue interaction

Faculty of Mechanical Engineering (FS)

Research Aide

Ljubljana

Oct 2018 - July 2021

- Assisted in developing a simulation of capillary tubes, which are a crucial component of various cooling devices, such as air conditioners and refrigerators.
- Analyzed the condensation of moist air in water condensers for different geometries and flow regimes.

Jozef Stefan Institute (IJS)

Research assistant (Master's degree)

Ljubljana

Dec 2019 - June 2021

- Analyzed spectroscopic measurements and optically scattering materials by using and modifying the Monte Carlo method in the CUDA platform and the C programming language.
